

Product Care Guide

- **Sheeting**

- Regular maintenance recommended – wash down every 3 months.
- Sheets must be installed with provided C3 or better screws
- In the event that sheets are cut, edges must be carefully treated with anti-corrosive product
- After installation, all steel shavings from drilling must be removed from the roof surface
- It is not recommended to touch up sheeting with paint, as the intended paint quality will vary from the factory applied paint finish of the sheets.
- If any sheet is damaged, where the coating is entirely removed from the sheet, this will lead to early onset of corrosion.

- **Structure**

- The recommended size of the foundation bases, as per engineered specifications is 500 x 500 x 500mm deep.
- On completion, it is recommended that an engineer or competent person consider individual ground conditions and environmental conditions to ascertain integrity of the installed structure.
- Structure will be guaranteed for 5 years to perforation*
- Sheets guaranteed 10 years*
- * provided installed as per recommendations & more than 5km from breaking surf.
